SUMMARY

Senior product manager for grid-scale BESS at LG Energy Solution, with 8 years in lithium-ion storage from deal engineering to product line ownership. Sells to AI data center customers including Meta, Google, NVIDIA and Microsoft, and to front-of-meter grid storage developers. Licensed Professional Engineer with an MBA in product strategy.

EXPERIENCE

LG Energy Solution | Senior Product Manager, Grid-Scale BESS Feb 2018 – present

- Own new product development for grid-scale ESS, from voice of customer through market requirements.
- Designed the 2.86 MWh pre-integrated container with Jabil, moving LG from selling racks to integrators to selling a finished product.
- Deployed 584 MWh on Fifth Standard in California and 361 MWh on Bright Arrow in Texas with the standardized container.
- Won approval for a 2-hour AC-integrated BESS, against a plan to stay at 4-hour, with a techno-economic business case.
- Booked about 3 GWh for 2027 on the 2-hour product, now LG's flagship for AI data centers.
- Priced feature trade-offs in EPC and installation cost, energy density and shipping weight to set the product requirements.
- Opened the AI infrastructure and data center segment for LG's BESS by defining its ride-through, interconnection and bring-your-own-generation feature set.
- Achieved UL 9540 listing for the container by setting fire safety requirements before the industry had settled how to prove them.
- Set the container's selling price and chose its inverter configuration with a cell-to-system cost model that included customers' EPC cost.
- Cut proposal turnaround from days to hours with battery modeling tools for degradation, thermal and augmentation optimization.

Comfort Energy | Design-Build Engineering Manager, HVAC July 2016 – Oct 2017

- Managed HVAC projects from proposal through construction and startup, exceeding the department's \$2M annual sales goal.

Pacific Gas and Electric | Energy Solutions Engineer Dec 2013 – July 2016

- Generated cumulative savings of 2,500 kW and 7 million kWh, helping the company exceed its energy-savings goal.

SELECTED PROJECTS

- **MBA Honda IMPACT Project:** Built a five-year go-to-market plan for Honda to launch hydrogen fuel cells, electrolyzers and second-life EV batteries into the US C&I market.

EDUCATION

MBA (STEM-designated), Product Management/Strategy, UC Davis Graduate School of Management, 2022

BS Mechanical Engineering, UC Davis, 2013, Dean's Honor List

CERTIFICATIONS

California Licensed Professional Engineer #M38303, Thermal and Fluid Systems (2016, NCEES)

SKILLS

BESS & power systems: energy storage systems, thermal systems, power conversion systems (PCS), lithium-ion system design, BMS, fire safety, codes & standards (UL, NFPA), techno-economic analysis

Product & commercial: product strategy, market requirements, VOC, competitive analysis, proposal tendering, contract negotiation, financial modeling

Grid/utility: interconnection, energy efficiency, demand response, US energy markets (ERCOT)
