SUMMARY

Senior product manager for grid-scale BESS at LG Energy Solution, with 8 years in lithium-ion storage from deal engineering to product line ownership. Sells to AI data center customers including Meta, Google, NVIDIA and Microsoft, and to front-of-meter grid storage developers. Licensed Professional Engineer with an MBA in product strategy.

EXPERIENCE

LG Energy Solution

Feb 2018 – present

Senior Product Manager, Grid-Scale BESS

Feb 2021 – present

- Designed the 2.86 MWh pre-integrated container with Jabil, moving LG from selling racks to integrators to selling a finished product.
- Deployed 584 MWh on Fifth Standard in California and 361 MWh on Bright Arrow in Texas with the standardized container.
- Won NPI approval for a 2-hour AC-integrated BESS, against a plan to stay at 4-hour, with a techno-economic business case.
- Booked about 3 GWh for 2027 on the 2-hour product, now LG's flagship for AI data centers.
- Set the container's selling price and chose its inverter configuration with a cell-to-system cost model that included customers' EPC cost.
- Achieved UL 9540 listing for the container, setting fire safety requirements and running hazard mitigation analysis and deflagration CFD with fire consultants.

Senior Systems Engineer, Energy Storage

Feb 2018 – Feb 2021

- Cut proposal turnaround from days to hours with battery modeling tools for degradation, thermal and augmentation optimization.
- Sized lithium-ion systems for North American deals and negotiated their technical exhibits and bid clarifications with utilities and developers.
- Built the US team's local knowledge base from HQ engineering resources.

Comfort Energy | Design-Build Engineering Manager, HVAC

July 2016 – Oct 2017

- Exceeded the department's \$2M annual sales goal, owning each HVAC project from first site walk to commissioning and startup.

Pacific Gas and Electric | Energy Solutions Engineer

Dec 2013 – July 2016

- Scoped data center efficiency projects, hot and cold aisle containment, economizers and variable-frequency drives, and quantified their savings and incentives.
- Generated 2,500 kW and 7 million kWh of cumulative savings across commercial and industrial efficiency projects, helping PG&E exceed its goal.

SELECTED PROJECTS

- **MBA Honda IMPACT Project:** Built a five-year business plan for Honda to launch hydrogen fuel cells and second-life EV batteries into the US C&I market.

EDUCATION

MBA (STEM-designated), Product Management/Strategy, UC Davis Graduate School of Management, 2022

BS Mechanical Engineering, UC Davis, 2013, Dean's Honor List

CERTIFICATIONS

California Licensed Professional Engineer #M38303, 2016, Thermal and Fluid Systems (NCEES)

SKILLS

BESS & power systems: BESS, power conversion systems (PCS), BMS, lithium-ion system design, degradation/thermal modeling, augmentation optimization, system sizing, fire safety

Grid & utility: interconnection, energy efficiency, demand response, US energy markets (ERCOT), electricity financial contracts (forwards, tolling, swaps)

Product & commercial: product development, product strategy, VOC, market requirements, competitive analysis, proposal tendering, contract negotiation, financial modeling
