SUMMARY

Senior product manager for grid-scale BESS with 8 years in lithium-ion storage, from deal engineering to product line ownership. Product manager who took LG Energy Solution from battery racks to a prefabricated containerized ESS, partnering with Jabil on the first product. Licensed Professional Engineer with an MBA in product strategy.

EXPERIENCE

LG Energy Solution | Senior Product Manager, Grid-Scale BESS Feb 2018 – present

- Replaced bespoke on-site integration, the market's biggest pain point, with LG's first prefabricated ESS container, built with Jabil.
- Designed the 2.86 MWh pre-integrated container with Jabil, moving LG from selling racks to integrators to selling a finished product.
- Won approval for a 2-hour AC-integrated BESS, against a plan to stay at 4-hour, with a techno-economic business case.
- Turned the 2-hour container into LG's flagship for AI data centers, with about 3 GWh booked for 2027.
- Opened the AI data center segment for LG's BESS by defining its ride-through, interconnection and bring-your-own-generation feature set.
- Met UL 9540 on the container by setting fire safety requirements before the industry had settled how to prove them.
- Built the cost model from cell cost to system selling price, plus customers' EPC cost, behind the container's pricing.
- Lead grid-scale BESS product strategy for AI data center customers Meta, Google, NVIDIA and Microsoft.

Comfort Energy | Design-Build Engineering Manager, HVAC July 2016 – Oct 2017

- Managed HVAC project sales, design and delivery, exceeding the department's \$2M annual sales goal.
- Designed HVAC and hydronic systems with energy modeling, equipment sizing and duct and piping layouts for commercial and residential projects.
- Set up an OSHA-compliant internal safety program with technician training classes and record-keeping procedures.

Pacific Gas and Electric | Energy Solutions Engineer Dec 2013 – July 2016

- Generated cumulative savings of 2,500 kW and 7 million kWh, helping the company exceed its energy-savings goal.
- Developed energy-efficiency projects for commercial and industrial customers under statewide efficiency and demand-response incentives, covering chillers, boilers and cooling towers.

SELECTED PROJECTS

- **MBA Honda IMPACT Project:** Built a five-year go-to-market plan for Honda to launch hydrogen fuel cells, electrolyzers and second-life EV batteries in the US C&I market.

EDUCATION

MBA (STEM-designated), Product Management/Strategy, UC Davis Graduate School of Management, 2022

BS Mechanical Engineering, UC Davis, 2013, Dean's Honor List

CERTIFICATIONS

California Licensed Professional Engineer #M38303, Thermal and Fluid Systems (NCEES), 2016

SKILLS

BESS & Power Systems: energy storage, BMS, lithium-ion system design, degradation/thermal modeling, augmentation optimization, system sizing, fire safety, codes and standards (UL, NFPA)

Grid & Data Center: interconnection, US energy markets (ERCOT), techno-economic analysis, energy efficiency, demand response, electricity financial contracts

Product & Commercial: commercialization, product development, NPI, product strategy, market requirements, competitive analysis, financial modeling, contract negotiation

Tools: Tableau, Advanced Excel, Salesforce, AutoCAD, MATLAB, Python
