SUMMARY

Senior product manager for grid-scale BESS at LG Energy Solution Vertech, building BESS for AI data center power. Before that, BESS systems engineering at LG, HVAC design-build, and data center efficiency at PG&E. PE, MBA.

WORK EXPERIENCE

LG Energy Solution Vertech | Boston, MA (Remote)
Senior Product Manager | Feb 2021 – Present

- Added a short-duration, AC-integrated 5 MWh BESS container for AI data centers to the product roadmap. Won executive approval and multi-GWh of forward bookings for 2027 delivery.
- Wrote the product requirements with hyperscaler and developer customers and our sales engineers. Specified inverter/PCS integration, medium-voltage switchgear, and thermal management.
- Set the microgrid islanding and black-start requirements and the compliance path for UL 9540, IEEE 1547, and IEEE 2800. Modeled system availability with k-out-of-n and Monte Carlo reliability analysis.
- Ran Stage-Gate delivery to release. Qualified vendors and contract manufacturers, and set cost targets with cell-to-system BOM models and make-or-buy analysis.
- Owned bottom-up pricing and component-to-system unit economics for RFPs.

LG Energy Solution Michigan | San Jose, CA
Senior Systems Engineer | Feb 2018 – Feb 2021

- Defined requirements for the company's first prefabricated modular 3 MWh BESS container. It replaced bespoke on-site builds and now runs on multi-GWh of utility-scale projects.
- Led technical sales and application engineering for IPP developers and EPCs. Sized systems, paired inverters, and planned augmentation with degradation models.
- Built TCO, NPV, and IRR models for customer projects, with site layouts sized to setback limits.

Comfort Energy | Milpitas, CA
Design-Build Engineering Manager, HVAC | Jul 2016 – Oct 2017

- Won repeat commercial work with contractors and architects through RFP proposals and mechanical estimating.
- Managed labor crews, inventory, and costs on installations, then handled commissioning and after-sales service.

Pacific Gas and Electric Company (PG&E) | San Francisco, CA
Energy Solutions Engineer | Dec 2013 – Jul 2016

- Audited commercial and industrial capital projects and structured utility incentives to speed adoption of behind-the-meter energy assets.
- Engineered energy efficiency and demand response projects for data centers and critical facilities. Modeled economizer, VFD, and central plant retrofits.

PERSONAL PROJECT

Financial Research Agent for a Paid Trading Community | Jul 2025 – Present

- Built a Python pipeline on an LLM agent API, Railway, and SQLite that parses 50–100+ Wall Street equity and macro research PDFs a day for a 100+ member trading community.
- Automated a cross-bank "Morning Pulse" briefing that turns hundreds of pages of research into overnight prints, trade ideas, and an economic calendar before the open.
- Deployed an LLM agent with tool calling and RAG over SQLite and financial APIs. It answers market questions, tracks user trades, and pulls real-time economic data.

EDUCATION & LICENSES

Master of Business Administration (MBA) | UC Davis Graduate School of Management | 2022
BS, Mechanical Engineering | University of California, Davis (Dean's Honor List) | 2013
Professional Engineer (PE), Thermal Fluids | California License #M38303 (NCEES) | 2016
