SUMMARY

Senior product manager for grid-scale BESS at LG Energy Solution, with 8 years in lithium-ion storage from deal engineering to product line ownership. Sells to AI data center customers including Meta, Google, NVIDIA and Microsoft, and to front-of-meter grid storage developers. Licensed Professional Engineer with an MBA in product strategy.

EXPERIENCE

LG Energy Solution

Feb 2018 – present

Senior Product Manager, Grid-Scale BESS

Feb 2021 – present

- Designed the 2.86 MWh pre-integrated container with Jabil, moving LG from selling racks to integrators to selling a finished product.
- Deployed 584 MWh on Fifth Standard in California and 361 MWh on Bright Arrow in Texas with the standardized container.
- Won approval for a 2-hour AC-integrated BESS, against a plan to stay at 4-hour, with a techno-economic business case.
- Booked about 3 GWh for 2027 on the 2-hour product, now LG's flagship for AI data centers.
- Opened the AI data center segment for LG's BESS by defining its ride-through, interconnection and bring-your-own-generation feature set.
- Achieved UL 9540 listing for the container, setting fire safety requirements and running hazard mitigation analysis and deflagration CFD with fire consultants.
- Set the container's selling price and chose its inverter configuration with a cell-to-system cost model that included customers' EPC cost.

Senior Systems Engineer, Energy Storage

Feb 2018 – Feb 2021

- Cut proposal turnaround from days to hours with battery modeling tools for degradation, thermal and augmentation optimization.
- Sized lithium-ion systems for North American deals and negotiated their technical exhibits and bid clarifications with utilities and developers.

Comfort Energy | Design-Build Engineering Manager, HVAC

July 2016 – Oct 2017

- Managed sales, design and project management of commercial and luxury residential HVAC projects, exceeding the department's annual project sales goal of \$2M.

Pacific Gas and Electric | Energy Solutions Engineer

Dec 2013 – July 2016

- Generated cumulative savings of 2,500 kW and 7 million kWh, helping the company exceed its energy-savings goal.
- Developed energy-efficiency projects for commercial and industrial customers under statewide efficiency and demand-response incentives, including cogeneration, thermal energy storage and battery peak-shifting.

SELECTED PROJECTS

- **MBA Honda IMPACT Project:** Built a five-year business plan for Honda to launch hydrogen fuel cells, electrolyzers and second-life EV batteries into the US C&I market.

EDUCATION

MBA (STEM-designated), Product Management/Strategy, UC Davis Graduate School of Management, 2022

BS Mechanical Engineering, UC Davis, 2013

CERTIFICATIONS

California Licensed Professional Engineer #M38303, Thermal and Fluid Systems (NCEES, 2016)

SKILLS

BESS: power conversion systems (PCS), BMS, fire safety, codes & standards (UL, NFPA), testing & certification, lithium-ion system design, degradation/thermal modeling, techno-economic analysis

Product & commercial: product development, NPI, product strategy, market requirements, competitive analysis, contract negotiation, financial modeling, proposal tendering

Grid/utility: power systems, interconnection, demand response, US energy markets (ERCOT), energy efficiency, electricity financial contracts (forwards, tolling, swaps)
