SUMMARY

Technical Product Leader specializing in battery energy storage systems (BESS) to accelerate the energization of gigawatt-scale AI data centers. Leverages deep expertise in grid-scale power generation systems and energy project commercialization to translate the physical and economic constraints of grid interconnection, co-located generation, and dynamic compute load behavior into bankable firm power solutions.

SKILLS

Product Management & Strategy: Hardware product roadmapping, component-to-system unit economics, bottom-up pricing, vendor & CM qualification, Stage-Gate delivery, technical RFP defense

Power Systems & Hardware: Grid-scale BESS, Inverters/PCS, medium-voltage switchgear, microgrid islanding & black start, thermal management, UL 9540, IEEE 1547, IEEE 2800

Technoeconomic & Quantitative Modeling: Cell-to-system BOM modeling, TCO/NPV/IRR analysis, make-or-buy evaluation, Monte Carlo & k-out-of-n reliability, site setback density, Python, SQL

WORK EXPERIENCE

LG Energy Solution

Senior Product Manager, Grid-Scale BESS | *Feb 2021 – Present*

- Expanded the product roadmap to include a short-duration AC-integrated 5 MWh BESS container for AI data centers, securing executive buy-in and multi-GWh forward bookings for 2027 delivery.
- Defined core BESS product requirements by engaging hyperscalers and developers alongside sales engineering, translating complex power challenges into functional specifications.
- Drove cross-functional product execution from concept through release, including design tradeoffs, vendor management, cost targets, and qualification testing.

LG Energy Solution

Senior Systems Engineer, Grid-Scale BESS | *Feb 2018 – Feb 2021*

- Defined product requirements for the company's first prefabricated modular 3 MWh BESS container, transitioning from bespoke on-site builds to a factory-integrated system now operating across multi-GWh of utility-scale projects.
- Led technical sales and application engineering for IPP developers and EPCs, building degradation models to optimize system sizing, inverter pairings, augmentation schedules, and project economics across varying duty cycles.

Comfort Energy

Design-Build Engineering Manager, HVAC | *Jul 2016 – Oct 2017*

- Drove commercial sales, RFP proposals, site walks, and mechanical estimating, cultivating relationships with general contractors, architects, and vendors to secure repeat business.
- Directed field operations and inventory from procurement to installation to final inspection, managing costs, labor crews, commissioning, and after-sales service and troubleshooting.

Pacific Gas and Electric Company (PG&E)

Energy Solutions Engineer | *Dec 2013 – Jul 2016*

- Evaluated customer capital projects across commercial and industrial portfolios, conducting technical audits and structuring utility incentives to accelerate customer adoption of behind-the-meter energy assets.
- Engineered energy efficiency and demand response projects for data centers and critical facilities, modeling cooling retrofits, economizers, VFDs, and central plant systems.

PERSONAL PROJECT

Financial Research Agent for Paid Trading Community | *Personal project* | *Jul 2025 – Present*

- Built an ingestion and extraction pipeline using LLM agent API, Railway, and SQLite to parse and structure 50–100+ daily Wall Street research PDFs across equities and macro for a 100+ member trading community.
- Automated a cross-bank "Morning Pulse" briefing, synthesizing hundreds of pages of institutional research into overnight prints, high-conviction trade ideas, and economic calendars before market open.
- Deployed an interactive LLM agent backed by SQLite and external financial APIs, using tool-calling and RAG to answer market queries, track user trades, and fetch real-time economic data.

EDUCATION & LICENSES

Master of Business Administration (MBA) | UC Davis Graduate School of Management | *2022*

BS, Mechanical Engineering | University of California, Davis (Dean's Honor List) | *2013*

Professional Engineer (PE), Thermal Fluids | California License #M38303 (NCEES) | *2016*
